Faculty Search Committee
School of Information
University of California, Berkeley

WISCONSIN
UNIVERSITY OF WISCONSIN–MADISON

Dear Members of the Search Committee,

I am applying for the Assistant Professor of Human-Computer Interaction position in the School of Information at the University of California, Berkeley. I am a PhD Candidate in Computer Science, School of Computing and Artificial Intelligence at the University of Wisconsin–Madison. I am advised by Dr. Rahul Chatterjee, writing the final chapter of my thesis, and expected to graduate by Summer 2027.

My research studies how technologies perpetuates gender-based violence (GBV) such as intimate partner violence, labor/sex trafficking, genocide, and environmental destruction. Specifically, how equitable interventions and research practices can reduce and prevent harm among communities, helping them foster healing and safety. To do this, I combine ethnographic, participatory, and design research methods to bridge disciplinary boundaries in and beyond human-computer interaction, security & privacy, sociology, psychology, education, politics, law, history, anthropology, and healthcare. I have made contributions across two interwoven threads: (1) designing interventions to support GBV survivors and frontline providers, and (2) research praxis to resist and liberate from structural violence. I have published 5 and 4 in-review papers at top-tier venues, such as CSCW (honorable mention top 5%), CHI (best paper top 1%), USENIX Security, CCS (finalist at CSAW applied research competition). I have also presented papers, panels, and workshops at policy, law, and healthcare venues like Wisconsin State Capitol, Cook County Human Trafficking Task Force, *Gaawiin Geyaabi ("no more")*, Women Are Sacred, Reclaiming Our Love, Native Nations Nursing, Helpers, and Healers Summit. I have guest lectured for UW–Madison courses who assigned my papers as course readings in Psychology: Sexual Violence Advocacy and in Social Work: Interpersonal Violence.

Embracing an *advocacy-researcher* practice, I direct the administration, fundraising, outreach, and survivor services at Madison Tech Clinic (MTC), a trauma-informed intervention supports GBV survivors. I have overseen over 180 consultation (over 40 survivors personally) with their digital safety needs. I coauthored five grant proposals, one of which was awarded $750,000 from US Department of Justice to expand our services to 26 urban and rural GBV organizations across 32 counties of Wisconsin, US. I have trained over 200 GBV providers (survivors, health practitioners, legal justice workers, and policymakers) through nation-level (National Network of Ending Domestic Violence, National Indigenous Women's Resource Center, Lac Courte Oreilles Tribal Nation) and state-level coalitions (EndAbuseWI, The Network, Mending the Sacred Hoop). I have also been awarded the Morgridge Fellowship to recognize my community-engaged scholarship.

As a teacher, I strive to cultivate intellectual rigor and compassionate care among students. I will incorporate an interdisciplinary perspective while teaching courses on security & privacy, HCI, ethics, information, health, and research methods. To secure funding, I plan to submit grant applications with national agencies (NSF, DOJ, NIH), foundations (Robert Wood Johnson, Sloane, Ford), UC Berkeley, and tech companies.

To set up a community-engaged research program, I will build on UC Berkeley's existing strengths by bringing my interdisciplinary perspective to human-centered security and privacy, responsible, and safe AI. I will do this by establishing a Tech Clinic in Berkeley with GBV organizations in CA. This clinic would complement existing initiatives like the Berkeley Cybersecurity Clinic at the Center for Long-Term Cybersecurity. I envision collaborating with researchers such as Hany Farid (on deepfakes, and digital safety), Niloufar Salehi and Ramesh Sarukkai (on historical and cultural perspectives on AI ethics and safety), Kimiko Ryokai (on co-design with Indigenous youth and families and more-than-human-centered design), John Chuang (on greenwashing, climate change, and sustainable AI), Morgan Ames (on silicon valley AI culture, countercomputing and resistance, and cultural dimensions of algorithms and AI), Kathryne Metcalf (on data sovereignty of health and genomic data through Indigenous governance and stewardship), Diag Davenport and Deirdre Mulligan (on AI governance and algorithmic transparency), and Coye Cheshire (on interpersonal relationships, trust, and participation). I will also collaborate across Kavli Center for Ethics, Science, and the Public, Center for Technology, Society and Policy, Center for Effective Global Action, Algorithmic Fairness and Opacity Group, Center for Health Technology, Center for Law & Technology, Cultural Analytics Group, Human Rights Investigations Lab, CITRIS Tech for Social Good, Center for Responsible, Decentralized Intelligence, and Center for Human-Compatible AI.

Please feel free to contact me with any questions about my application. Thank you very much for your time and consideration.

Sincerely,
Naman Gupta, PhD Candidate, University of Wisconsin-Madison
