Faculty Search Committee
David R. Cheriton School of Computer Science
University of Waterloo

WISCONSIN
UNIVERSITY OF WISCONSIN–MADISON

Dear Members of the Search Committee,

I am applying for the position of Assistant Professor in the David R. Cheriton School of Computer Science at the University of Waterloo. I am a PhD Candidate in Computer Sciences at the School of Computing and Artificial Intelligence at the University of Wisconsin–Madison. I am advised by Dr. Rahul Chatterjee, and expect to graduate by Summer 2027.

My research studies how technology perpetuates **gender-based violence (GBV)**. I study **interpersonal harms (e.g. intimate partner violence, stalking, and AI-generated intimate imagery)** and **structural harms (e.g. trafficking, genocide, and environmental violence)**, especially in rural and Indigenous communities. To prevent harm and foster safety, I design **equitable sociotechnical interventions (e.g. education, tools, and advocacy practices) and research practices (e.g. methods, data, and design practices).** I combine ethnographic, participatory, and design research methods to bridge disciplinary boundaries in and beyond computing (human-computer interaction, security & privacy), sociology (psychology, politics, law, history, anthropology, healthcare), and education. I have made contributions across two interwoven threads: I design **(1) interventions to support GBV survivors and frontline providers**, and propose **(2) research frameworks to resist and liberate from structural violence.** I have **5 published and 4 in-review papers** at top-tier venues, such as **CSCW (honorable mention top 5%), CHI (best paper top 1%), USENIX Security, CCS (finalist at CSAW applied research competition)**. I have also presented papers, panels, and workshops at policy, law, healthcare, and education venues such as Wisconsin State Capitol, American Educational Research Association, Cook County Human Trafficking Task Force, *Gaawiin Geyaabi ("no more")*, and Women Are Sacred.

I value translating research into social impact through a community-engaged interdisciplinary approach, collaborating closely with survivors, advocacy groups, health practitioners, legal justice workers, and policymakers to ensure interventions are safe, ethical, and grounded in lived experiences. I direct the administration, fundraising, outreach, and survivor services at Madison Tech Clinic (MTC), a trauma-informed clinic that supports GBV survivors. I have overseen over 191 consultations (over 40 survivors personally) with their digital safety needs. I coauthored five grant proposals, one of which was **awarded $750,000 from US Department of Justice** to expand our services to 26 rural GBV organizations across 32 counties of Wisconsin, US. This expansion has resulted in us delivering over 50 remote consultations (25% of total consultations) with 15 rural GBV organizations so far. I have **trained over 200 GBV providers** at the nation level (National Network of Ending Domestic Violence), Indigenous level (National Indigenous Women's Resource Center, Courte Oreilles Tribal Nation, Mending the Sacred Hoop) and state level (EndAbuseWI, The Network). I have also been **awarded the Morgridge Fellowship for Community-engaged Scholarship**.

As a teacher, I strive to cultivate intellectual rigor and compassionate care among students. I have TAed for various fundamental and advanced courses in Computer Sciences. I have also **guest lectured for interdisciplinary courses** in UW–Madison with my papers as course readings in Psychology: Sexual Violence Advocacy and in Social Work: Interpersonal Violence. At UW, I will incorporate an interdisciplinary perspective while teaching courses on security & privacy, HCI, ethics, information, health, and research methods.

I will set up a community-engaged research program by establishing a Tech Clinic in Waterloo with GBV organizations in rural areas and Indigenous nations in Ontario. To secure research funding, I plan to submit grant applications with national agencies (NSERC, CIHR, MITACS, CIFAR, SSHRC), foundations (Ford, MILA, Open Society, John D. and Catherine T. MacArthur), UW, and tech companies. I will build on UW's existing strengths by bringing my interdisciplinary perspective to community-engaged human-centered security and privacy, responsible, and safe AI. I envision collaborating with researchers such as Xinyue Shen on addressing AI-misuse of hate speech, unsafe images, and malicious deepfake; Diogo Barradas on politics of censorship and resistance movements; Jesse Hoey on privacy, security, and health perceptions around smart-home devices; Edith Law on human-AI interaction and the ethics for marginalized communities; Maura R. Grossman on trustworthy evidentiary practices in high-stakes contexts such as gender-based violence and sexual assault.

Please feel free to contact me with any questions about my application. Thank you very much for your time and consideration.

Sincerely,
Naman Gupta, PhD Candidate, University of Wisconsin-Madison
